Subject: New Minerals

I purchased two wonderful lots of new fluorite from China. One is a purple botyroidal, translucent fluorite bup to 5 inches, while the other is a slightly oval complete "balls" of fluorite that that has a slight color change in the blue/green range (up to 6" in size).

Also, the were some superb stibnite on Cacite (largest one 15 1/2" x 8" and the best that I have seen); calcite stalactites; fluorite (6 locations); calcite; pyrite; Japanese twin quartz; hematite rose on quartz; quartz; kesterite on aquamarine;and 700 others specimens.

I will try to keep you posted as new specimens appear.

Chris
