Subject: July updates

Dear Friends,

From some days we started to post the new minerals samples from the old collection about which we wrote. We try to alternate systematic samples with display specimens; at the moment we have posted the following species:

Hauyne, Sazykinaite, Zanazziite, Hubeite, Osumilite, Cyanotrichite, Phosphophyllite, Hopeite, Minyulite, Tincalconite, Stolzite, Zorite, Pezzottaite, Steacyite, Celestine, Uvarovite, Klebelsbergite, Henritermierite, Kulanite, Dresserite, Rutile, red Quartz, Adamite, Linarite, Reddingite, Topaz, Barylite

.....

Keep in touch please, because we planned to put on our web pages about 150 new specimens in the month of July (before the August holidays)
