Subject: Greenside Minerals - New Specimens

Hi,

Our latest update consists of 5 new specimens from China, 5 from England and 1 from Portugal. Those from China include pyromorphite, baryte and fluorite. From England we include pyromorphite from the Caldbeck Fells, Cumbria, 2 superb barytes from Yorkshire and a very nice olivenite from Wheal Gorland, Cornwall. Our single specimen from Portugal is a stunning cluster of perfectly formed wolframite crystals.

Regards,

Gary Atkinson
