Subject: Greenside Minerals - New Specimens

Hi,

Our latest update consists of 29, mainly Cornish, specimens from the Mr Potter's World of curiosity collection we purchase several years ago. It includes bournonite from Herodsfoot Mine, chalcocite from Geevor and a thumbnail-sized gold specimen from Hope's Nose, Devon.

A few of the pieces in this update have previously been available on the website and are included again for completeness.

We have also received new copies of "Minerals of Northern England" and Andrew Tindle's "Minerals of Britain and Ireland". These titles have proved to be very popular with mineral collectors.

Regards,

Gary And Richard
