### Welcome to Wrights Rock Shop

I created the Tucson 2011 Gallery with the new find of siderite after calcite, cuprite, copper after cuprite, brookite, bastnesite, malachite on shattuckite, imperial topaz from Zambia, inesite and others on 2/1/11. The finest cuprites that have been found are from this deposit. According to the Russian publication, the Mineral Observer, the mine will be through the oxidation zone in six months and the cuprites will no longer be found. We were able to look at most of the other dealers new stock and selected the best from that stock. Near perfect pieces are rare.

I have purchased the wholesale stock from the Gobins. The stock will include European, African, Asian, and world wide specimens with emphasis on Morocco, the Congo, Namibia, Afghanistan, Pakistan, China France, and Germany.

We will , also, be adding specimens from Luiz Menezes new finds of muscovite pseudomorphs after tourmalinde, **rutile var. struverite**, and others.

Please mention that you are a member of Wright's Mineral News for your 10% discount.
