Welcome to Wrights Rock Shop

I created the Tucson 2012 Gallery on 1/23/12. The new find of hematite included quartz is the best and most intense, rich orange quartz that has been found from Orange River and perhaps any location. The hematite is included in a very clear quartz that then is overcoated with clear quartz. The quartz has a superb, gem luster. The new find of effenbergerite contains the best specimens ever found of this rare species with crystals a quantum leap above previous specimens. The new fluorites are among the most aesthetic specimens that I have seen.
