Subject: New Orange Quartz Gallery

Wrights Rock Shop

I created the Orange quartz with specimens from the single pocket found in 2011 of hematite included quartz is the best and most intense, rich orange quartz that has been found from Orange River and perhaps any location on 9/26/13. The hematite is included in a very clear quartz that then is overcoated with clear quartz. The quartz has a superb, gemluster.

I purchased many of the better specimens in 2012, but was able to find the remainder of the pocket recently. The find was approximately 150 specimens. The person that brought the lot into the US sold the group to a collector for the largest cluster . He then repurchased by the remainder of the lot. The combined purchases of Don Olsen and I accounted the top 30% of the specimens. 42 of the specimens were sold to another dealer. He had not tried to sell any of the pieces, but because of the Denver floods I was able to purchase his lot at a very reasonable price.
