Visit our website for more information and to purchase these fine minerals.

Autonomous Region of China. This mine is one of China's newest and most modern underground mines. The specimens are a deep rich purple in color and have clusters of lustrous crystals, clearly showing the crystal structure. Many of the specimens have crystals blanketing all sides .

The **Offerings** for this month include an interesting find of Chalcocite from a private collection. The specimens were originally from the Flambeau Mine in Wisconsin. We also have Quartz, Fluorite, Datolite and a mixed species consisting of calcite and golden-yellow prehnite. All compliment the featured mineral,. deep purple fluorite.

This year there were many beauties from the mineral kingdom on the monthly offering as well as the featured mineral. Many of these are **still available**, and you can read more about them in the January offering sheet.

There are also numerous years of gold and silver-level sets. These are a great way to add to your collection or can be a great "starter" for someone who is just beginning to build their collection. You can read more about this in the January offering sheet.
