China Update - April 2014

Chalcopyrite, Siderite, Tennantite and Distinctive Calcites

On the website this week I've added new specimens under [China Update – April 2014](#) . This update features excellent new chalcopyrite/siderite and tennantite specimens from the Kaiwu Mine (the tennantites have been confirmed by analysis). It also includes amazing highly distinctive new calcites from Chenzhou Prefecture, Hunan Province (including some unique mushroom-shaped ones). I've posted a few excellent quality calcite specimens from Shimen, Wenshan, Gongcheng and Daye as well.

For all new specimens at McDougall Minerals, see [New Specimens](#).

If you are receiving this email in any format in which the above links don't work, the addresses are:
