New Diopside from Republic of Congo (Brazzaville)

This is a rare week, with the Peruvian Epidote update as well - I will not usually send more than one update email in a week.

I've added a small group of new specimens under [Dioptase - July 2014 Update \(click here\)](#). They are beautiful new diopside specimens from Mindouli, Republic of Congo (Brazzaville) – these were mined very recently and arrived in Europe a few days before Sainte-Marie. Sharp, lustrous and of course, wonderful green.

You have to be a glutton for photographic punishment to shoot any diopside, let alone many of them, (it is so hard to capture the colour and intensity) but hopefully the photos in this update do these fine specimens reasonable justice.

For all new specimens at McDougall Minerals, see [New Specimens](#).

If you are receiving this email in any format in which the above links don't work, the addresses are:

<http://www.mcdougallminerals.com/Dioptase-from-Congo.html>

<http://www.mcdougallminerals.com/New-Specimens.html>

Hope you enjoy these specimens!
