New from Mali

This new [Mali Update \(click here\)](#) includes unusually fine balls of radiating green prehnite crystals perched upon sharp, lustrous blocky epidote crystals. There have been many lesser prehnites from Arrondissement Diako, but the prehnites from this particular find have better definition and are nicer than typical ones from here. Some very aesthetic combinations and groups in this small lot. Also in this update are two more of the great yellow stilbites from Diamonkara (there were almost none in Denver, save for damaged ones).

For all new specimens at McDougall Minerals, see [New Specimens](#).

If you are receiving this email in any format in which the above links don't work, the addresses are:
