## New from China

There are new specimens on the site in a [China Update \(click here\)](#), featuring a diverse group of excellent specimens, including super fluorite, ilvaite and löllingite from the Huanggang Mines in Inner Mongolia. There are connoisseur-level pieces among them.

The update also includes beautiful individual pieces from the Yaoganxian Mine and other well-known Chinese localities - a beryl from Xuebaoding with amazing morphology (almost no presence of prism faces), a gorgeous group of twinned cinnabar crystals from Tongren, colourful blue hemimorphite from Wenshan, a wonderful little twinned cerussite

from the famous mines at Daoping and an exquisite barite from Lushi, Henan.

For all new specimens at McDougall Minerals, see [New Specimens](#).

If you are receiving this email in any format in which the above links don't work, the addresses are:
