New from Yukon

I've posted a new [Yukon Update \(click here\)](#) featuring selected specimens of uncommon minerals that can be hard to obtain. These minerals are from the famous phosphate occurrences at Rapid Creek, in the Dawson Mining District, Yukon, Canada. The update includes gormanite, kulanite, and goyazite, along with lazulite and wardite. Gormanite and kulanite were first described from Rapid Creek. All of the specimens in this update are from the heyday of specimen discoveries at Rapid Creek in the 1980s and 1990s.

Hope you enjoy them!

My usual reminder - prices on the website are in Canadian dollars, which trade at a good (approx 20%) discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

For all new specimens at McDougall Minerals, see [New Specimens](#).
