New From Brazil

I've posted a new [Brazil Update \(click here\)](#), with superb, diverse specimens, including a spectacular morganite from the famous finds at the Urucum mine (this one is likely from the 1973 pocket), some truly remarkable synchysite crystals from a small new find at Novo Horizonte, and pleochroic uvite tourmalines (with purple and green hues) from Brumado. The new update also includes beautiful brazilianite on albite, a blue montebrasite, hydroxylherderite, elbaite tourmaline, rutilated quartz, a hematite "iron rose" in exceptional condition, and a sharp blue fluorapatite with bertrandite.

My usual reminder - prices on the website are in Canadian dollars, which trade at a good

(20-25%) discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

If you are receiving this email in any format in which the above link does not work, the addresses for this update and the New Specimens gallery are:
