## **New from Mexico; New Videos!**

I've added great new specimens to the website in this Mexico Update ([click here](#)). This update includes several mineral species for which Mexico is famous, including adamite, austinite, wulfenite, danburite and datolite. There is some interesting provenance in this update as well: there are specimens from John S. White, Tracy Kimmel, Peter Bancroft, Peter Megaw, Larry Conklin, John Dutrizac and more.

### **New Videos!**

At long last, I've added videos to the new mineral specimen listings on the website! I hope that the videos will help to give an additional sense of each piece. However, at least at this stage, I am much better able to fine tune the colour accuracy of the still photographs (so that specimens look like they do in person in daylight (shade)), so please rely on the photographs rather than the videos for colour accuracy. I hope you find the videos a helpful addition! (And thanks in advance for your patience while I get better at this.:) )

## **Canadian Dollar**

The currency disparity remains in favour of the U.S. dollar these days. My usual reminder - prices on the website are in Canadian dollars (if you are thinking in - or used to browsing online minerals in - US dollar terms).
